

2015 Certificate of Avoided GHG Emissions

Presented to

NYSERDA

by the United States Environmental Protection Agency Combined Heat and Power Partnership in recognition of your organization's achievement in reducing carbon pollution with CHP.

Based on the operating data provided, your 144 CHP projects have avoided emissions of an estimated 4,300,000 metric tons of carbon dioxide, compared to conventional energy sources. This includes 2015 avoided emissions of more than 649,000 metric tons, equal to those from the generation of electricity used annually by 89,283 homes.

A handwritten signature in black ink, appearing to read 'Matt Clouse', is centered below the main text.

Matt Clouse
Chief, Energy Supply and Industry Branch
Climate Protection Partnerships Division

*The 2015 Certificate of Avoided GHG Emissions presents an estimate of the overall carbon emission reductions of your organization's operational projects based on modeled efficiencies for common CHP system configurations and is intended for outreach and educational purposes only.
